Carroll Gardens

FINEST HARDY MUMS

Hardy Chrysanthemums are among the most dependable flowers in the autumn garden, providing glorious color and spicy fragrance from early September (August with some varieties) until heavy frost.

There are Chrysanthemums of many types, from the Cushion Mums for low mounds of color in borders and rock gardens, to the long-stemmed kinds for cutting.

We feel that we have one of America's finest and most up-to-date Chrysanthemum collections. Our list includes selected varieties from the University of Minnesota, University of Chicago, and Bristol collections, and from several other sources in different parts of the country, including some of our own introductions and the new imported Super Giant English varieties.

Due to lack of space, we are listing only the most important varieties that we have. Many other sorts are available. Write us if you are interested in them.

CULTURE. Chrysanthemums will grow in any good average garden soil which has been enriched with manure or good commercial fertilizer. Plant them 15 to 18 inches apart. Cultivate the soil between them, particularly while they are in the young stage. You can pinch the plants up to July 15 if they are tall and spindly. Don't pinch any more after that date. Hardy Chrysanthemums do best if grown in full sun. If they are planted in the shade, they will grow too tall, have weak stems, and produce inferior blooms.

POSTAL and EXPRESS RATES have been increasing for the past few years, and recently postal rates went up 25% more. This makes it impossible for us to absorb all the transportation cost as we have in the past and still maintain the same prices and our usual high standard of products. Instead of raising prices, we decided to ask our customers to send a few cents extra with the order, and help to absorb part of the transportation cost.

HOW MUCH TO SEND: On all orders less than and up to \$5.00 add 50c for postage. All orders over \$5.00, send 50c plus 5c for each additional dollar over \$5.00.

For example, if your order came to \$9.00, you would send 50c for the first \$5.00, and 5c for each of the additional \$4.00, making a total of 70c.

A PLAN FOR A PERENNIAL BORDER

A simplified plan to fit your space, your location and your pocketbook. An exclusive and original idea of Carroll Gardens to help you have a beautiful perennial border at reasonable cost and with minimum care. Read it carefully and decide on the group that fits your purpose best. If you are planning a formal garden, a straight-line border fits best into your scheme. But if you are trying for an informal effect, a curved border will be better. A perennial border is always best planted along a dividing line, along a picket fence or in front of shrubbery. It is never advisable to put it in the middle of the lawn. The length as well as the width depends on the space that you have available.

THE PERENNIAL BOOKLET OFFERED FREE ON OUR ORDER SHEET WILL GO INTO MORE DETAIL REGARDING THE PLANTING OF A PERENNIAL BORDER. YOU WILL FIND IT HELPFUL. If this plan doesn't suit you, why not lay one out for yourself? You'll have lots of fun doing it.

A Keyed Plan for your convenience. A Perennial Border showing the effective use of Summer Phlox. See page 7 for varieties. PLEASE READ CAREFULLY. Here is how the plan works: If you want to use only 24 plants, these will be enough for a bed 8 feet long and 3 feet wide, using one plant for each space provided as keyed. If you want to make the bed 16 feet long and 3 feet wide, use 48 plants, or 2 for each space. If you want to make the bed 24 feet long and 3 feet wide, use 72 plants, or 3 for each space. However, if you have the space and want a really spectacular and colorful border, make the bed 30 feet long and 5 feet wide. Put 6 plants in each space as keyed, and set them about 12 inches apart. The red mark indicates where groups of spring-flowering bulbs such as tulips, daffodils, hyacinths, crocus, etc., may be planted to brighten the border in very early spring. Peonies, iris and Oriental poppies may be planted where the letters appear.

CLEMATIS Jackmani

Showy, Large-Flowering Clematis

Sand and peat moss may be mixed with heavy soil to loosen it, and a little lime should also be added. Set the collar of the plant at least 2 to 3 inches below the surface of the soil. Firm the soil well around the roots, and water thoroughly.

Choice Shrubs

LILY-OF-THE-VALLEY SHRUB

(*Pieris japonica*)

One of the loveliest shrubs in our collection, for there is not a season in the year when it does not attract attention. The graceful sprays of flower buds are formed in late summer, and later the foliage assumes glorious red and bronzy tints. In early spring the buds open into creamy white flowers resembling lilies-of-the-valley. This shrub will develop into a lovely specimen if planted in half shade or full sun. It grows to about 5 feet. Nice young plants, 10 to 12 in., \$1.25 each; 3 for \$3.25; 6 or more, \$1.00 each.

MOUNTAIN LAUREL

(*Kalmia latifolia*)

Handsome native evergreen shrub, useful for foundation planting and other partially shaded spots in the garden. Ideal for naturalizing in woodlands. Nice 3-yr.-old plants, 8 to 12 in. high, \$1.75 each; 3 for \$5.00; 6 or more, \$1.25 each.

EVERGREEN MAGNOLIA

MAGNOLIA GRANDIFLORA

(Not illustrated)

The handsome evergreen Magnolia of the South. A beautiful pyramidal tree attaining a height of 40 feet or more. The very large, thick, evergreen leaves are lustrous above and rusty beneath. The cupped, white flowers are 6 to 8 inches across and have a lemon odor. The Southern Magnolia prefers being on high rather than low ground; it must be moist but well drained. Hardy in Maryland and southward. Nice healthy plants, 12 to 15 in., \$2.00 each; 2 for \$3.50; 3 for \$5.00.

for Acid Soil

EVERGREEN AZALEAS

We are proud of the Azaleas we offer this year. They are the finest in quality and variety, and at reasonable prices, too. All reach about the same height at maturity—2½ to 3½ feet. Azaleas require acid soil and prefer a partly shaded location. They are not recommended for colder areas than Long Island. These lovely evergreen Azaleas are available in the following varieties:

Coral Bells. Coral-pink.

Hexe. Large, semi-double, rose-red.

Hino-Crimson. Very brilliant crimson-red. A much-improved Hinodegiri.

Bushy, 3-yr. plants, ready to bloom, \$2.00 each; 3 for \$5.50; 6 for \$10.00

New NIKKO BLUE HYDRANGEA

(Not illustrated)

A beautiful new hardy Hydrangea. It blooms on the new wood; therefore, you are sure of getting a good crop of blooms every year. It will make a nice compact bush about 3 to 4 feet high and give you a wealth of bloom during the summer. In acid soil the flowers are blue; in neutral or alkaline soil they turn pink. To make the soil acid, water every two or three weeks with aluminum sulphate (2 tablespoonfuls to the gallon). Give winter protection in the North. Plant in partial shade or full sun. Strong, 2-yr., field-grown plants, \$2.25 each; 2 for \$4.25; 6 for \$11.50.

AZALEA MOLLIS HYBRIDS

The color range is through innumerable shades of orange, flame, yellow and salmon-orange of the most brilliant hues. Unlike all other Azaleas, it is quite tolerant of lime and does well most anywhere. It is very hardy; ten degrees below zero does not affect the flower buds. A group of these in bloom in the foreground of the shrub border is a delightful sight. Average height of old plants about 3 to 5 feet. Mixed shades only.

Bushy, 8 to 12-in. plants, some with flowering buds, \$1.50 each; 3 for \$4.00; 6 for \$7.00. Bushy, 12 to 15-in. plants, covered with flower buds, \$2.50 each; 3 for \$7.00; 6 for \$12.50.

AZALEA MOLLIS. Selected yellow. Nice bushy plants, well budded, 10 to 15 in. high, \$3.00 each; 3 for \$8.00. Stock very limited. Please order early.

Blueberries

FOR ORNAMENT AND FRUIT

Cultivated Blueberries are hardy shrubs of rare beauty. They need acid soil and full sun or very little shade. They are doubly valuable because they are fruitful and ornamental throughout the entire year.

Cabot. Very early. A broad, low bush 3 feet tall. New growth in winter is light red over olive. Large berries with a delicious subacid flavor.

Concord. Over 6 feet tall. The young growth is bright red in winter. Large berries, a few days earlier than Rubel. Very fine flavor.

Jersey. Very large, vigorous bush. The winter color of the young growth is light red over golden brown. The light blue berries are among the very largest and ripen with Rubel.

June. A little earlier than Cabot. Berry is large, medium blue, sweet and delicious when fully ripe. Newer and probably better than Cabot.

Pioneer. About a week later than Cabot. The bushes are stocky, seldom exceeding 4 feet in height, broad rather than high. Stems are stout and stiff, and the winter color of the new growth is a delightful red. Heavy crops of berries close set in the cluster, larger than Rubel, of medium blue color and fine flavor.

Rancocas. Slender, vigorous, upright habit, rarely over 5 feet tall. The winter twigs are dark red. Berries are larger than those of Rubel and begin to ripen several days earlier.

Rubel. A vigorous, productive variety. Bushes stand 6 feet high, and the winter color of the young wood is rich red. The large berries are usually ready the first week in July.

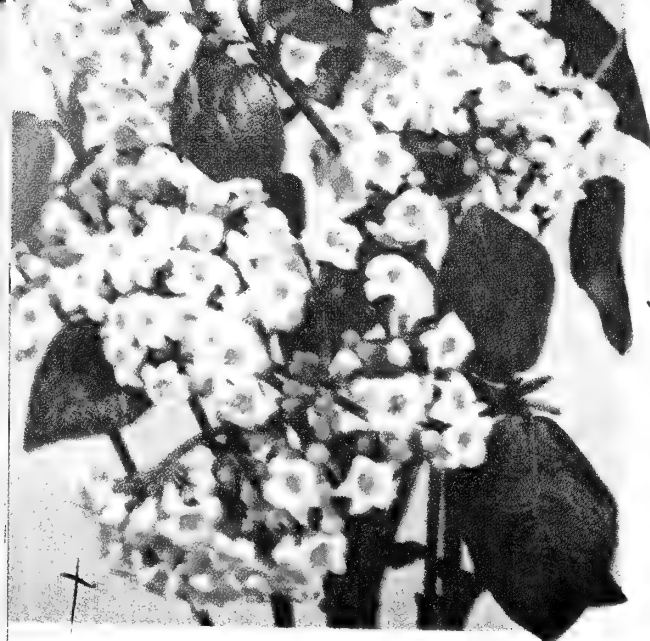

For best results, plant not less than 3 plants of 3 different kinds

Strong, 3-year-old plants, 3 for \$4.50; 6 for \$8.00; 12 for \$15.00; \$1.75 each

New HYBRID

← RHODODENDRON

The aristocrats of broad-leaf evergreen shrubs. Perhaps no other flowering bush makes such a spectacular show or creates more interest than these new hybrid Rhododendrons. Ideal for foundation planting on the east or north side of the house, or for specimen or group plantings, in any partially shaded location in the garden. They require acid soil, and it is always best to mix a liberal amount of peat moss or rotted oak leaves into the soil at the time of planting, and to add a mulch of either leaves or peat moss—a little each year, preferably in the fall. This will furnish the proper soil condition that they need. At maturity, these handsome shrubs will attain a height of 4 to 6 feet. Plants offered are grown from seed of the finest new reds. No doubt, of course, that these varieties will show some variations in color; therefore, the plants offered are not guaranteed as to color, but we can assure you that whatever color you get, it will be fascinating and most beautiful. 3-yr.-old, transplanted plants, 10 to 12 in. high, \$2.00 each; 2 for \$3.50; 4 for \$6.00; 12 for \$15.00.

The Three New GRANDIFLORA ROSES

TALL AND STURDY; EASY TO GROW

Free Blooming All Summer and Fall

This brand-new class is creating quite a stir in the Rose world. It combines the best features of the Hybrid Teas and the Floribundas. The flowers have the classic high-centered form and long cutting stems of the former; sometimes they are carried singly and sometimes several on a stem, but always there is enough stem for cutting. They

make very effective arrangements. The plants are exceedingly vigorous and healthy. In some areas they will grow to a height of 3 to 5 feet in the second year. That makes them perfect for the back row of the Rose garden, for tall hedges and for use instead of some of the over-planted common garden shrubs.

BUCCANEER. Plant Pat. 1119. A golden yellow beauty. The 30-petaled blooms are of Hybrid Tea size and form. Generally they are borne one to a stem. Extra-tall plants to 5 feet or more. Bright buttercup-yellow buds and blooms continually cover the plant. Long, sleek buds and cupped flowers with light, very sweet fragrance. \$2.50 each; 3 for \$6.60.

QUEEN ELIZABETH. Plant Pat. 1259. All-America Winner for 1955. A breath-taking blend of soft carmine-rose and dawn-pink. The delightfully fragrant flowers are borne on long, almost thornless cutting stems. Very disease-resistant foliage covers the plant almost to the ground. A magnificent sight when in bloom—and that means all summer long, until frost. \$2.75 each; 3 for \$7.20.

CARROUSEL. Plant Pat. 1066. A beautiful garnet-red Rose, velvety and unfading, which lasts extra well when cut. The 20-petaled flower is of Hybrid Tea form, carried on wonderful stems. A vigorous, upright, bushy plant to about 3 feet tall, which blooms abundantly all season. It makes a fine hedge. \$2.00 each; 3 for \$5.25.

EVERBLOOMING CLIMBING ROSES

These beautiful everblooming climbers are very satisfactory for warmer sections of the country, but we do not recommend them for colder localities unless you are willing to experiment with them and see what they will do for you. They are certainly worth some extra care in the way of winter protection. These are identical with the bush forms and bloom continuously all summer and fall. If you live in the Southern States or in the warm Western States, you should certainly try some of them.

TREE ROSES

Plant Tree Roses as accents in Rose beds, at either side of steps, in the perennial or annual flower border to relieve flatness, in the shrub border to prolong color. There are many spots in every garden that can be improved by the use of one or more Tree Roses.

These well-formed Tree Roses will bloom the first summer after spring planting, like the bush Hybrid Teas.

No definite information was available at the time this Catalog went to press as to what varieties of Tree Rose would be available. We suggest that you order by colors, such as

RED PINK WHITE YELLOW TWO-TONE

And we will send you the varieties nearest to the color wanted.

Plant them around a pool, in the rock garden, as a narrow border for Rose beds. Fine, too, for window and porch boxes. Care for them as you would Hybrid Teas.
